

## Our Triple is a Home Run

Triple detection is a whole new ballgame. Our detectors for multi-angle light scattering, refractive index and differential viscosity represent the leading technology in their categories. When our three instruments are combined, they create an all-new level of capability that dramatically expands your characterization capabilities. It's an example of the whole exceeding the sum of its parts. Now, you can do more, see more, and know more. Simultaneously.

Triple detection combines the power of three—or more—instruments to determine absolute molecular weights, sizes and viscosities.
