

This lab manager is:

- Enjoying a long lunch
- Catching up with coworkers
- Making 1,536 DLS measurements
- All of the above

We're not suggesting that you waste time. But you could if you wanted to, while still accomplishing an impressive amount of work. The DynaPro® Plate Reader III automatically makes up to 1,536 unattended dynamic light scattering (DLS) measurements, enabling you to generate more results with greater precision in less time than an individual, cuvette-based instrument. You can do what you used to do faster. Or explore vastly more screening experiments in the same amount of time. Either way, you get expanded capability to find answers to your questions faster.

What you do with the time is up to you.

Learn how your lab can gain more insight in less time at wyatt.com/lunch

The DynaPro Plate Reader III makes up to 1,536 unattended DLS measurements with sample volumes as little as 4 μ L.
