

"I can't believe I published the wrong molecular weight."  
 "It wasn't your fault, Max. It was your assumption's fault."

□ □ □

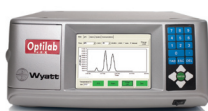

Calibration-based measuring techniques require you to make assumptions which aren't always correct. That's why every major pharmaceutical and biotechnology company, as well as most federal regulatory agencies are switching from relative methods to Wyatt Technology's absolute measurements. Our DAWN® multi-angle light scattering (MALS) instruments allow you to determine absolute molecular weights and sizes *without* relying on so-called standards, or measurements made in someone else's lab. Wyatt instruments measure *all* of the quantities required for determining absolute molar masses *directly*. To learn how to end your dependence on reference standards forever, call 805.681.9009 or visit **wyatt.com** and request our free 28-page *Ultimate Guide to Light Scattering*. Our booklet is bound to lift your spirits.

 CORPORATION

**DAWN HELEOS.** The most advanced multi-angle light scattering instrument for macromolecular characterization.

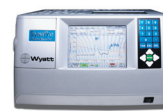

**Optilab rEX.** The refractometer with the greatest sensitivity and range.

**ViscoStar.** The viscometer with unparalleled signal-to-noise, stable baselines and a 21st-century interface.

**Eclipse.** The ultimate system for the separation of macromolecules and nanoparticles in solution.

**DynaPro.** The world's most popular dynamic light scattering instrument for protein and nanoparticle characterization.
