

**Other instruments
describe macromolecules.**

Only Wyatt lets you see them.

That's because molecular characterization with Wyatt Technology's multi-angle light scattering detectors is 25 times more precise than the competition*. In fact, using a Wyatt DAWN® instrument is the only way to *directly* measure molecular weights and sizes without column calibration or reference standards.

But don't take our word for it. Thousands of scientists already attest to the accuracy and versatility of Wyatt instruments in over 700 peer-reviewed light scattering articles—60 times as many as the competition combined.

Maybe that's why 28 of the top 30 chemical, pharmaceutical, and biotechnology companies rely on Wyatt instruments. Or

why *all* major federal regulatory agencies and national laboratories use Wyatt.

The people who invented commercial laser light scattering.

Since 1968, when Wyatt first commercialized laser light scattering, our instruments have helped thousands of scientists, from Nobel laureates to members of the National Academy of Sciences to researchers in over 35 countries worldwide.

Our commitment to your success includes unmatched training, service, and support. Our three day, all-expenses-paid Light Scattering University® course in Santa Barbara, California is designed to give you the greatest proficiency with our instruments in the least amount of time (*U.S. customers only*).

We also provide ongoing access to our extensive service and support network, including nine PhD scientists with broad expertise in liquid chromatography, polymer chemistry, protein science, biochemistry, and light scattering. So no matter how great a challenge you face, our staff will help you find the solution.

For more information on our full range of instruments, worldwide dealer network, applications, and a bibliography of light scattering papers, please call 805-681-9009, fax us at 805-681-0123, or visit us at www.wyatt.com. And see for yourself why Wyatt is the clear choice.
