

# Only one person says Mass better than we do.

But when it comes to determining *molar* mass, we wrote the book. And the software. And the hardware.

In fact, the DAWN® is the only instrument that *directly* measures absolute molecular weights and sizes, with readings up to 25 times *more* precise than the competition. And our new Optilab rEX™ provides the greatest detection power and dynamic range of *any* RI detector available.

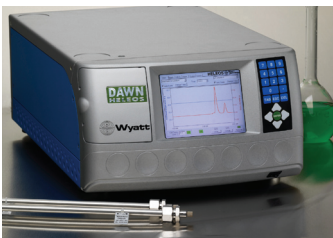

Maybe that's why 28 of the top 30 chemical, pharmaceutical and biotechnology

companies rely on Wyatt instruments, as do thousands of scientists worldwide who cite Wyatt instruments in *over* 2000 peer-reviewed articles.

## Light scattering for the masses.

Wyatt offers the widest range of instruments, and addresses all sample types—from polymers and proteins to carbohydrates and particles.

And because we offer the *only* multi-angle modular solution, you can choose only the detectors you need.

Our service, support and training are just as comprehensive, whether you are consulting with our 15 PhD scientists or attending our all-expenses-paid Light Scattering University® course in Santa Barbara, California (*U.S. customers only*).

## Come See the Light

For more information on Wyatt instruments, dealers and applications, please call 805-681-9009 or visit us at [wyatt.com](http://wyatt.com).

We're the answer to your molecular characterization prayers.
